GYM MANAGEMENT SYSTEM

Client Proposal • Workflow, Modules & Implementation Phases

One connected system
From member admission and payments to attendance, trainer assignment, workout plans, and membership renewal.

Prepared for: Gym / Fitness Club Client

Document type: Solution Overview

A practical, phased approach to digitizing gym operations, improving member experience, and giving management clear visibility into daily activity and revenue.

MEMBERS Profiles & memberships	**OPERATIONS** Attendance & training	**FINANCE** Fees & reporting

1. Project Overview

The Gym Management System is a centralized application for managing the complete member lifecycle. It replaces scattered registers and manual tracking with structured records, clear workflows, and management reports.

Project objectives

• Keep member details, membership periods, and payment history in one place.

• Reduce manual attendance work and prevent entry where membership rules do not allow access.

• Assign trainers to members and manage workout plans and training progress.

• Track invoices, partial payments, outstanding dues, and membership renewals.

• Give owners and managers reliable reports on attendance, revenue, and membership activity.

2. Main Modules

Dashboard

Quick view of total and active members, today's check-ins, upcoming expiries, pending dues, and revenue summaries.

Member Admission & Profiles

Register a member, capture contact details and photo, record emergency contact and relevant fitness goals, and generate a unique member ID.

Membership Plans

Configure monthly, quarterly, half-yearly, and annual packages; define access hours, pricing, discounts, and optional services.

Fees, Invoices & Payments

Create admission and renewal invoices, record full or partial payments, issue receipts, and review outstanding balances.

Attendance Management

Record check-in/check-out by manual entry, QR code, or supported membership card; validate membership status and keep visit history.

Trainer Management & Assignment

Maintain trainer profiles, availability, assigned members, assignment dates, and workload.

Workout Plans & Progress

Create plans with exercises, sets, reps, schedules, and progress notes. Availability depends on the selected scope.

Reports & Notifications

Review member growth, attendance, collections, unpaid fees, expiring memberships, and trainer assignments; configure reminders through supported providers.

Users, Roles & Settings

Control access for owner, manager, receptionist, trainer, and accountant; configure gym rules and retain audit history.

3. End-to-End Workflow

01	**Inquiry or walk-in**	Receptionist records a prospective member or starts a new admission.
02	**Member registration**	Capture personal details, contact information, photo, emergency contact, and required consent.
03	**Choose membership**	Select a package, duration, access type, start date, and optional personal training.
04	**Invoice and payment**	Create the invoice and record full or partial payment. Activation follows the gym's agreed payment policy.
05	**Activate membership**	Generate member ID or QR code and show membership validity and status.
06	**Assign trainer (optional)**	Select a suitable trainer, confirm schedule, and link the member to a training plan if included.
07	**Daily attendance**	Member checks in; system validates eligibility, records the timestamp, and blocks duplicate or ineligible entries according to policy.
08	**Training and progress**	Trainer reviews assigned members, follows the plan, records sessions, and updates progress.
09	**Renewal or expiry**	System highlights upcoming expiry; staff follow up, collect renewal fees, and record the next membership period.

Key business rules

• Membership eligibility is checked before attendance is accepted; authorized exceptions should be logged.

• Past memberships, invoices, payments, and attendance should remain available for audit and reporting.

• Trainer assignments should have status and dates; overlapping assignments can be restricted by gym policy.

• Payment, refund, cancellation, membership-freeze, and extension rules are finalized with the client before development.

4. Implementation Phases

The system is delivered in manageable phases so the client can review core workflows early and agree on priorities before advanced features are introduced.

PHASE 1

Core Member & Membership Management

Member admission and profiles; membership plan setup; membership activation and expiry; renewals; basic dashboard.

Deliverable: Working member and membership workflow.

PHASE 2

Attendance & Payments

Check-in desk and attendance history; membership validation; invoices and receipts; partial payments; outstanding dues; daily collection summary.

Deliverable: Operational attendance and fee-management features.

PHASE 3

Trainer & Workout Management

Trainer profiles and availability; member-to-trainer assignment; training schedules; workout plans and exercise library; progress notes.

Deliverable: Trainer workflow and member training records.

PHASE 4

Reports, Notifications & Administration

Revenue and attendance reports; expiry and dues reminders; user roles and permissions; audit logs; operational settings.

Deliverable: Management reporting and administration tools.

PHASE 5

Optional Integrations & Expansion

QR/device integration, SMS or WhatsApp provider, member portal/mobile app, multi-branch support, equipment maintenance, and other agreed extensions.

Deliverable: Additional features selected and approved by the client.

5. User Roles & Access

Role	Typical access
Owner / Super Admin	All modules, business settings, users, branches, and financial reports.
Gym Manager	Daily operations, memberships, trainers, attendance, and approved reports.
Receptionist	Member registration, check-in, invoices, payment entry, and receipts as permitted.
Trainer	Assigned members, workout plans, session records, and progress updates.
Accountant	Invoices, payments, dues, expenses, and finance reports.
Member (optional portal)	Own membership status, attendance history, payment status, and workout plan.

6. Reports & Business Visibility

- Membership: active, expired, new admissions, renewals, and upcoming expiries.
- Attendance: daily check-ins, member visit history, and peak usage periods.
- Finance: collections by date and payment method, unpaid balances, refunds, and expenses if included.
- Training: members per trainer, assignment status, planned sessions, and progress records.

7. Suggested Technology & Delivery Approach

A practical implementation could use Laravel for the backend, MySQL for the database, and a responsive web interface for desktop, tablet, and reception use. QR scanners, messaging providers, biometric devices, and mobile apps should be treated as integrations that require separate technical and cost confirmation.

Recommended delivery cycle

Requirement confirmation → workflow and database design → UI/UX approval → development by phase → client testing and feedback → deployment → staff training and handover.

8. Items to Confirm Before Final Estimate

Item	Decision needed
Gym structure	Single branch or multiple branches
Attendance method	Manual, QR/barcode, membership card, or biometric integration
Training model	Independent gym access, personal training, group classes, or a combination
Billing rules	Plan durations, joining fee, partial payments, freezes, refunds, and discounts
Notifications	SMS, WhatsApp, email, or in-app reminders
Scope and schedule	Priority modules, integrations, delivery milestones, budget, and support requirements

Scope note

This document describes a proposed solution and indicative implementation phases. Final timelines, pricing, integrations, acceptance criteria, hosting, data migration, and support terms should be agreed in a separate estimate or statement of work after requirements are confirmed.

Thank you

We look forward to helping streamline gym operations with a system that can grow with the business.
